

New Appendix: The calculation reference table of charter fee for WBA service provider for charter renewal

The annual charter fee for a WBA service provider for charter renewal (NT\$)
= The average annual value of each MHz, according to the results of auction of unpaired frequency segments released following the Regulations for Administration of Mobile Broadband Businesses in 2015, \times bandwidth (30MHz) \times regional coefficient

The average annual value of each MHz in the preceding Paragraph
= (winning bidding price of 2570~2595MHz range + winning bidding price 2595~2620MHz range) \div 15years \div 50MHz \circ

Should there be no winning bidding price of the frequency ranges in the preceding Paragraph, the fee shall be calculated by using the reserve price.
